

# CCK and CETM

## Lithium Battery Test Chamber

- Volumes: up to 3000 liters
- Different temperature ranges
- Construction: stainless steel
- Reliable construction
- Turnkey designs
- CE mark

**DYCOMETAL EQUIPOS DE C.C., S.L.**

C/ De la Ciència, 35-37

08840 - Viladecans (Barcelona) - SPAIN

T: (34) 936 526 610 F: (34) 936 407 607

## FEATURES:

### Construction

**CCK/e** and **CETM/e** chambers are manufactured in stainless steel, with high temperature fiberglass or ceramic wool insulation. No asbestos is used in chamber construction. Built externally, based galvanized steel sheet with oven-dried acrylic paint to RAL-9010. Chamber doors with security viewing window.

Interior workspace is designed to minimize sparking, greatly reduces the risk of explosion during testing.

### Safety Elements

- Reinforced structure to support explosions.
- Additional temperature limiters: sensors to detect overheating in samples.
- Interior elements anti-sparks
- Fast interior pressure release by rupture membrane
- Electromagnetic door lock with reinforced interlock.
- Detection of high levels of H<sub>2</sub> and CO.
- Interior inerting with/without O<sub>2</sub> level measurement.
- Interior forced cooling.
- Fire detection and extinction by flow of CO<sub>2</sub> in the workspace.

### Control

**CET/e** and **CETM/e** are furnished with a Eurotherm programmable controller, which includes a LED display with alphanumeric keyboard.

Temperature inside the chamber is measured by a precision thermocouple, Pt-100.

### Standards

- SAE J 2464
- UL 2580
- UL 1642
- IEC 62660-2
- IEC 61960
- IEC 62281
- UN/DOT 38.3

## OTHER EQUIPMENTS:

All the security and safety elements could be installed in another systems like: thermal shock, chambers, vibration chambers, heating ovens or walk-in test chambers.
